

One centralized AI workspace for government.
Your data never leaves your building.

1

One machine
We install a single AI server in your building. The entire system runs on it, and nothing ever leaves it — it works with the internet unplugged.

2

One workspace
Staff sign in once, in a browser: email, chat & text messaging, phone calls, video meetings, shared calendar, document drive and databases, and a password vault for department credentials.

3

One AI you talk to
Staff talk to it, by chat or voice: ask for any record, have it draft a notice or report, let it take the minutes, tell it to translate. It creates the documents itself.

The short version: Google Workspace plus ChatGPT — in one box, in your building.

CORE COMPETENCIES

- **On-premises AI deployment** — complete delivery: hardware, installation, configuration, staff training, and support. Air-gap capable.
- **Integration with existing systems** — any data source, any file type: records, court, tax, and permit systems, databases, spreadsheets, scanned archives — unified into one searchable system the AI answers from.
- **Speech & language services** — meeting transcription and automated minutes, call handling, report drafting, and English↔Spanish constituent service.
- **Public communications & outreach** — AI-drafted notices, newsletters, and bilingual outreach; text and email reminders for court dates and appointments — the same engine that runs sales and marketing for our commercial customers.

DIFFERENTIATORS

- **Sovereign by design** — model, data, and inference remain inside your network perimeter: full data residency, local operational control, no external dependencies, and no cloud authorization requirements.
- **Sized for local budgets** — complete first-year deployments at county scale, priced as a one-time system purchase with modest annual support, not an open-ended subscription.
- **We operate what we deploy** — Heyno runs this same platform in production, serving live users daily. You are buying a working system, not a services engagement that builds one.
- **Fixed-price, milestone-gated delivery** — documented deliverables and sign-offs at each stage; source-code escrow available for continuity assurance.

PAST PERFORMANCE

- **Heyno platform (2024–present)** — the exact workspace described above, built and operated end-to-end by Heyno and serving live users daily — on Heyno's own inference, speech-to-text, and telephony infrastructure.
